

Documentation:

I did the 3 Basic Extensions and the first 2 Advanced Extensions

User Page: Click on a user on the Users page to show all information for that user, including their topics

- Topic Page: Click on a topic on the Topics page to show all information for that topic, including users that are members of that topic

- Posts for User Page: Click on a user on the View Posts page to reshown

View Posts with all the posts for that user

Styling: Add a style sheet and make your app look nice

Use Views: Use database views in your project so that no SQL joins appear in code in your middleware (main.js)

- Use Stored Procedures: Use stored procedures where any route requires multiple SQL commands
